

Control software, documentation, web content and track hardware from a single system

AllChange gives you total control from a single system.

Key Benefits

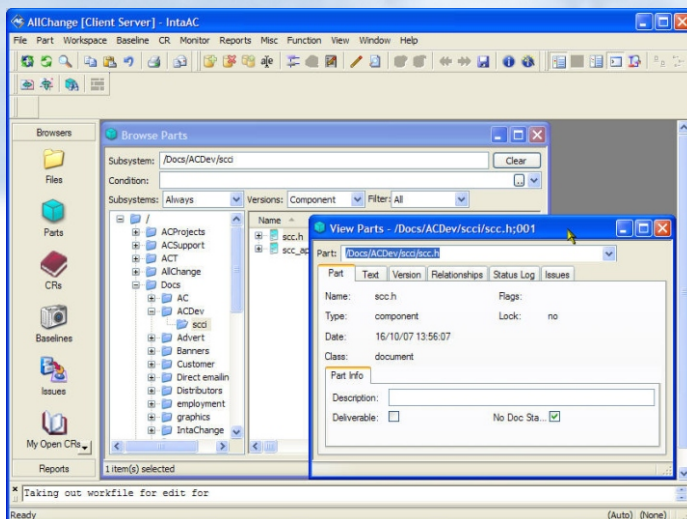

- ◆ Comply with SOX and ITIL
- ◆ Control and automate change
- ◆ Improve productivity
- ◆ Reduce the cost of change
- ◆ Prioritize changes
- ◆ Automate processes
- ◆ Increase efficiency
- ◆ Prevent unauthorized change
- ◆ Control risk/impact analysis

- ◆ Automatic audit trails
- ◆ Customize to reflect different business processes
- ◆ Automated email notification
- ◆ Store different information against each version of a configuration item
- ◆ Work with file or non-file based configuration items
- ◆ Build both hierarchical and non-hierarchical relationships to other configuration items for impact analysis
- ◆ Directly relate physical changes to both change and release management
- ◆ Automatically update work areas when new versions are created

Secure, traceable document management

- ◆ Trace and automate document reviews and publication
- ◆ Streamline workflow
- ◆ Ensure that the right people have the right versions of the right documents
- ◆ Ensure that the right versions are published
- ◆ Find the document you need from the centralized storage... and much more

AllChange works with file or non-file based configuration items such as hardware or hardware assets.

Use the folding view in the parts browser to see the hierarchical relationships between parts. Use the parts viewer to store and view detailed information about each part.

Professional configuration management

View your business critical information from a central management resource

Track, manage and control your information from a central point.

Key Features

- ◆ Control from a central point
- ◆ Integrate changes and releases
- ◆ Customize to your processes
- ◆ Carry out impact analysis
- ◆ Maintain audit trails
- ◆ Full version control
- ◆ Automate regular processes

◆ Integrate configuration item, change and release management

◆ Check in, check out, submit, assign, prioritize, search, report, release, build and much more

◆ Customize fields, states, error messages, menus, functions and reports

◆ Carry out impact analysis with multiple user-definable relationships for configuration items, change and release types

◆ Automatically create and maintain audit trails

◆ Support multiple business processes for each type of item, change and release

◆ Develop and release individual product parts independently

◆ Automate and enforce release procedures

◆ Version control releases as well as configuration items

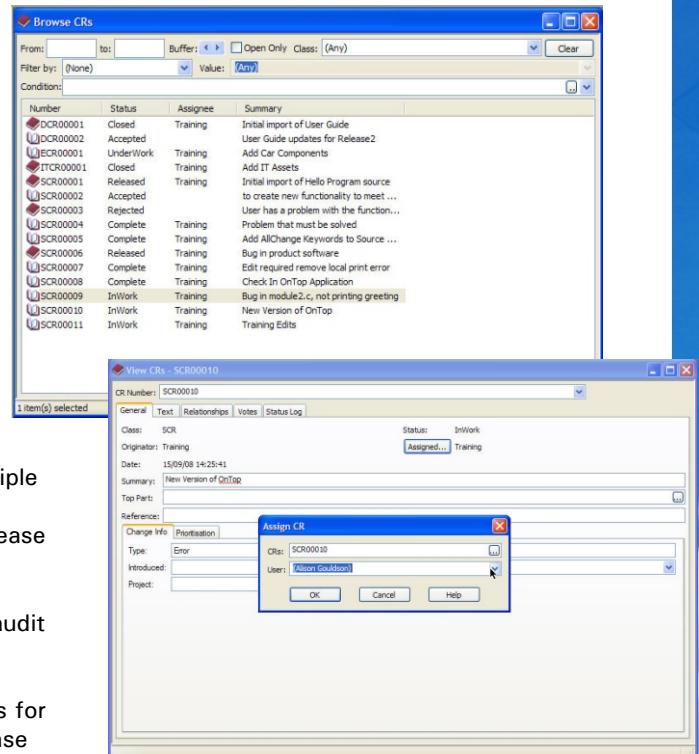

◆ Copy a release as the foundation for future development

◆ Identify what has changed since your last release

◆ Configure to support your release processes

◆ Automatically generate release notes

◆ Integrated FTP to support deployment

AllChange has full change management facilities.

Create change records from incoming emails and create releases based on changes you want to implement.

Build and view hierarchical relationships of changes and store detailed information about each change.

Assign, track and manage changes, all from a single point.
