

IntaView simplifies information capture

Web-based Change Management

IntaView lets you gather information more efficiently, using custom designed forms.

IntaView uses Microsoft InfoPath 2003, so you can customize the screen to match your existing forms.

[Http://www.microsoft.com/uk/office/infopath/prodinfo/default.mspx](http://www.microsoft.com/uk/office/infopath/prodinfo/default.mspx)

Use your existing change request or incident report forms as the basis for your design, then map your existing fields onto the IntaChange Enterprise fields.

Design the look and feel of your forms and create individual ones for specific purposes, for example, a form just for adding change requests.

Improve your information gathering processes and make the information that you collect, available throughout your organization.

IntaView has a user friendly interface that lets you create forms in WYSIWYG ("what you see is what you get") and it comes complete with a set of templates, to help you get started.

"IntaView provides an invaluable way of efficiently capturing, sharing and reusing, business critical information."

- Adapt forms easily, to cope with new information requirements
- Adapt forms to your way of working
- Create individual forms for specific work processes
- Create a familiar working format for staff
- Control the information that is viewed
- Print forms directly from IntaChange

Change management the easy way
