INTASOFT

AllChange

New AllChange interfaces with Dreamweaver MX

Intasoft, the UK's leading configuration management company, has developed an interface between their configuration management software *AllChange*, and Macromedia's Dreamweaver 4/MX.

"Intasoft recognises that web development requires a different approach to traditional software development. Until now, web developers have had state-of-the-art development tools but have had to make do with out-of-date configuration management methods. The interface with Dreamweaver 4/MX is just the first step in our plans for configuration management specifically designed for web development", says Intasoft's managing director, Malindi Lamb.

"My personal productivity has risen by between 5% and 10% simply because I no longer have to leave the Dreamweaver 4/MX environment anymore", comments professional web developer Jason Etheridge. "It means that I can get the benefits of a process based configuration management tool yet still work how a web developer should."

AllChange provides an integrated support environment for Dreamweaver 4/MX, simplifying version control and helping team based development by supporting developers in working together. As Jason explained "*AllChange* gives me true change management workflow, while proactively helping me deliver what is required, when it is required."

AllChange features for rapid software development environments include:

- ◆ Files manipulated by Dreamweaver can be checked directly into and out of *AllChange* from within the Dreamweaver interface.
- ◆ Automatic audit trails
- ◆ Easy to navigate Web user interface – ideal for Mac and PC
- ◆ Baselining ensures that team members always work on the correct file version
- ◆ Customised reporting lets all users create personalised reports and queries
- ◆ Automatic E-mail notifications for tasks allocations and status

About Intasoft

Intasoft was founded in 1986 to support the rapid growth in software development brought on by the introduction of personal computing power, the requirement for a more structured design and development approach and new management methods.

Since then we have seen the emergence of more powerful, cheaper hardware, rapid advances in development languages, ever more sophisticated software tools and an ever increasing need for organisations to be able to respond more quickly, more cost effectively and more responsibly to changing business, legal, political and environmental imperatives. Our philosophy, in such a demanding world, is to listen to what our customers want and deliver what they have asked for as quickly, easily and as simply as possible.

Companies and organisations, including leading corporations such as Applied Integration, Australian Defence Organisation, British Telecom, UK Civil Aviation Authority, CMG Admiral, Cobham, EDS, ESL Defence, IBM (UK), ICL, LANL, Lloyds Insurance Services, Lloyds/TSB Wealth Management, Logical–E Business Solutions, Martin Baker Aircraft, The Open University, Oxford Glycosciences, P&O Stena Line, Provident Financial Management Services, Raytheon Systems, The Royal Society for the Protection of Birds, Spirent Penny and Giles Aerospace, Thales Defence, UK Hydrographic Office and Unisys have all selected *AllChange* to manage their development projects.

Intasoft has headquarters at 1 Emperor Way, Exeter Business Park, Exeter, Exeter, Devon, UK EX1 3QS Tel: +44 (0)1392 314080. Visit Intasoft's Web site at www.intasoft.net
